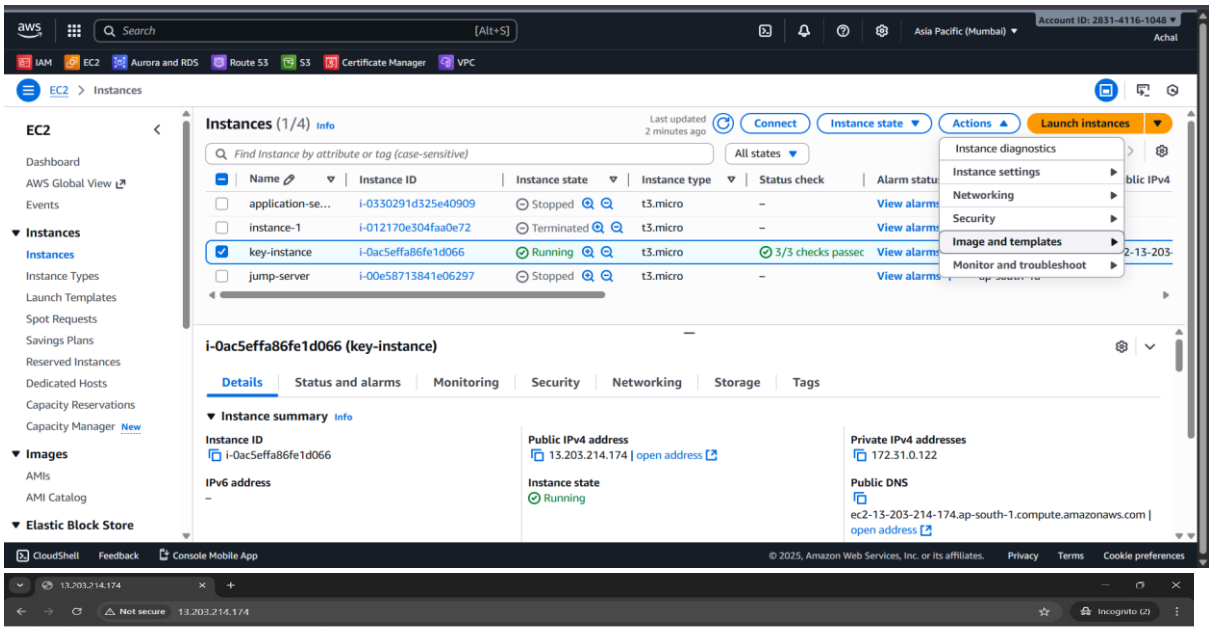
TASK 15

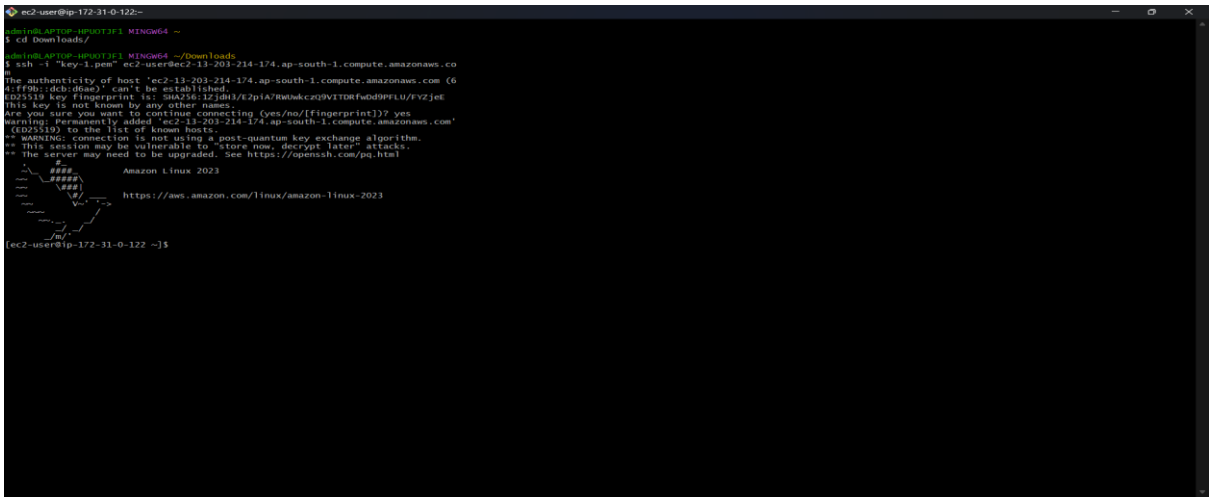
- How can I access an ec2—instance if the key pair file is deleted.

-Step 1: Create EC2-instance.

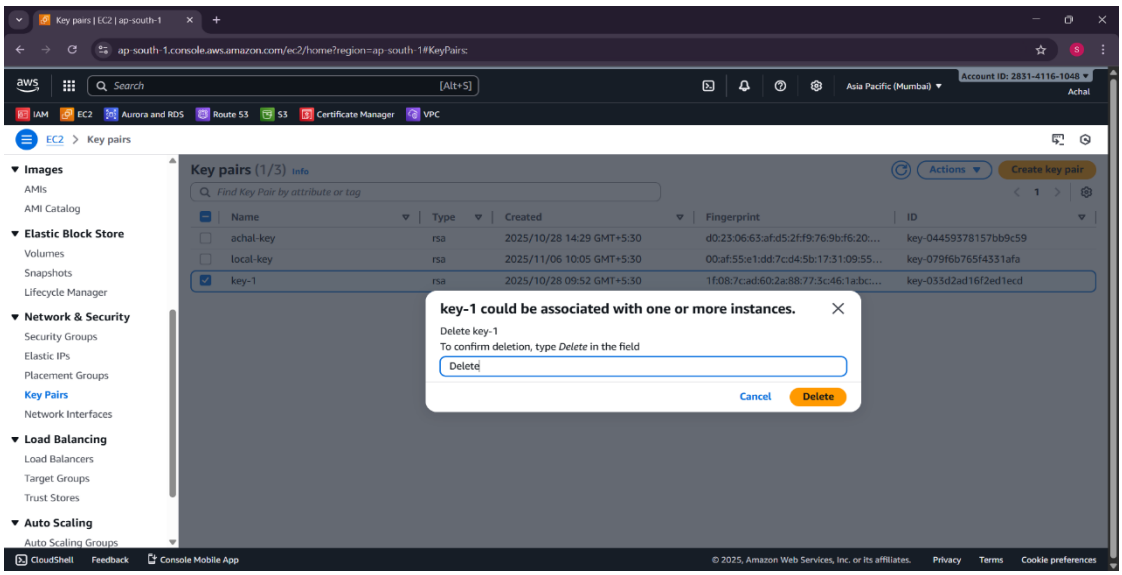


This is a instance ip-172-31-0-122.ap-south-1.compute.internal

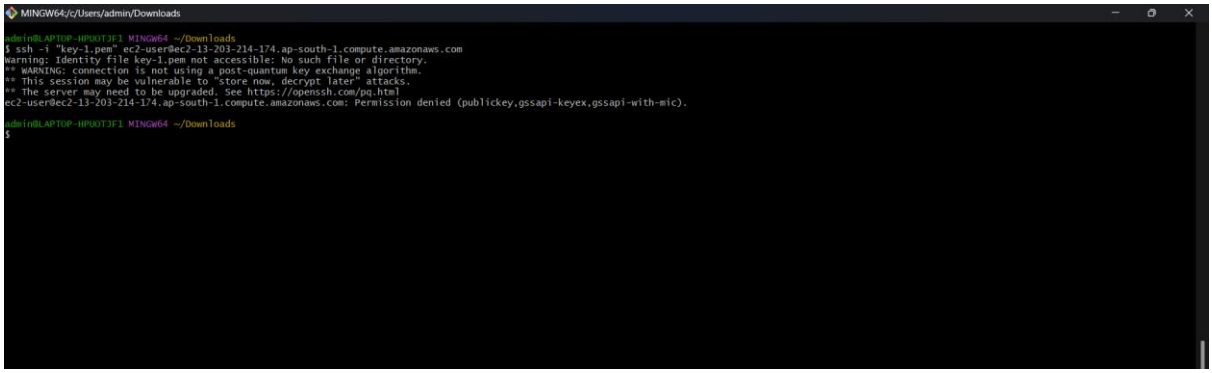
-Step 2: Connect to the CLI.



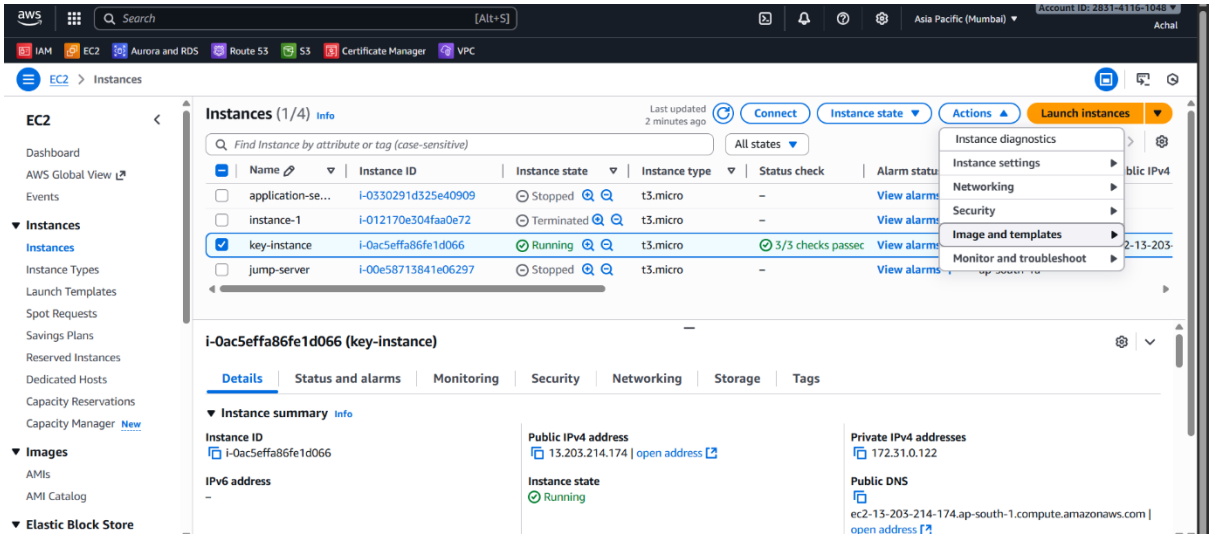
-Step 3: delete key pair file of the ec2-instance A.

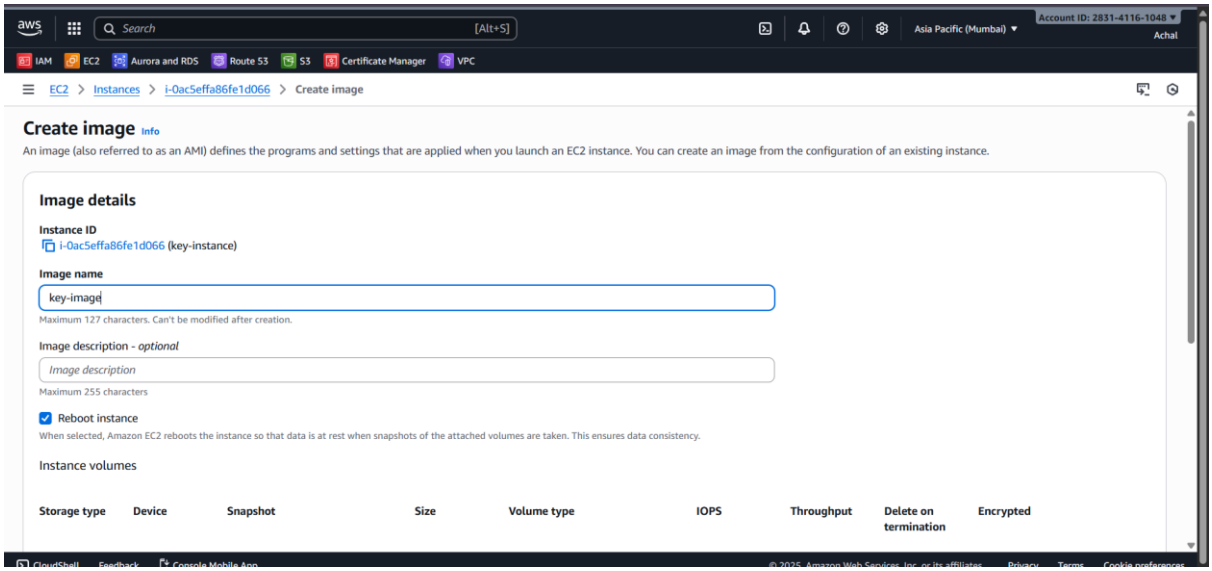


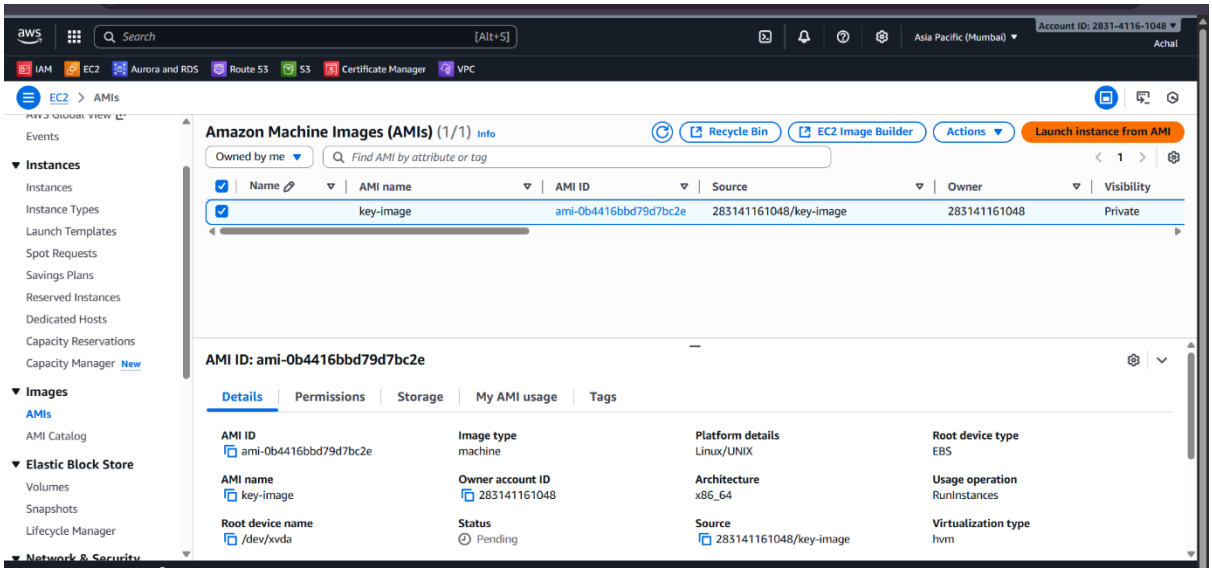
-Step 4: we can't access ec2-instance to CLI If the key pair file is deleted.



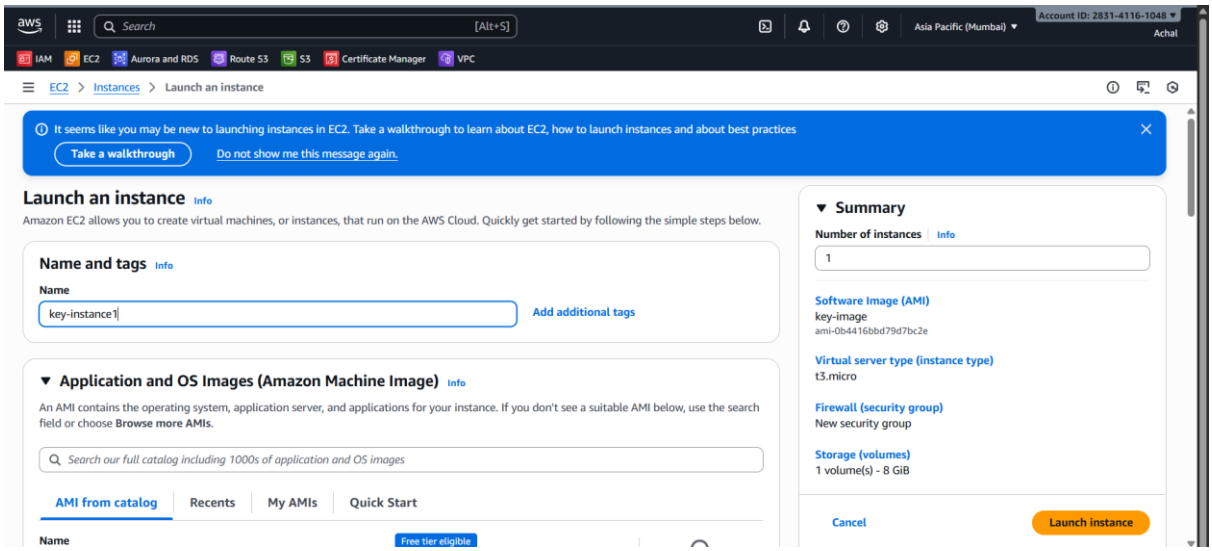
-Step 5: Then create Image for that instance if we want to access that Instance.

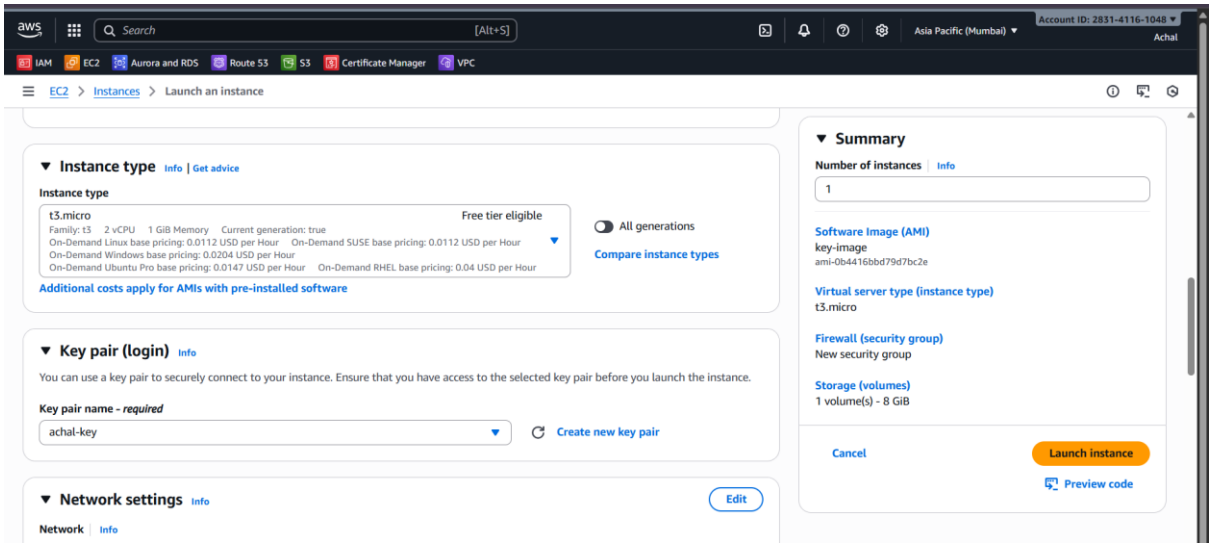




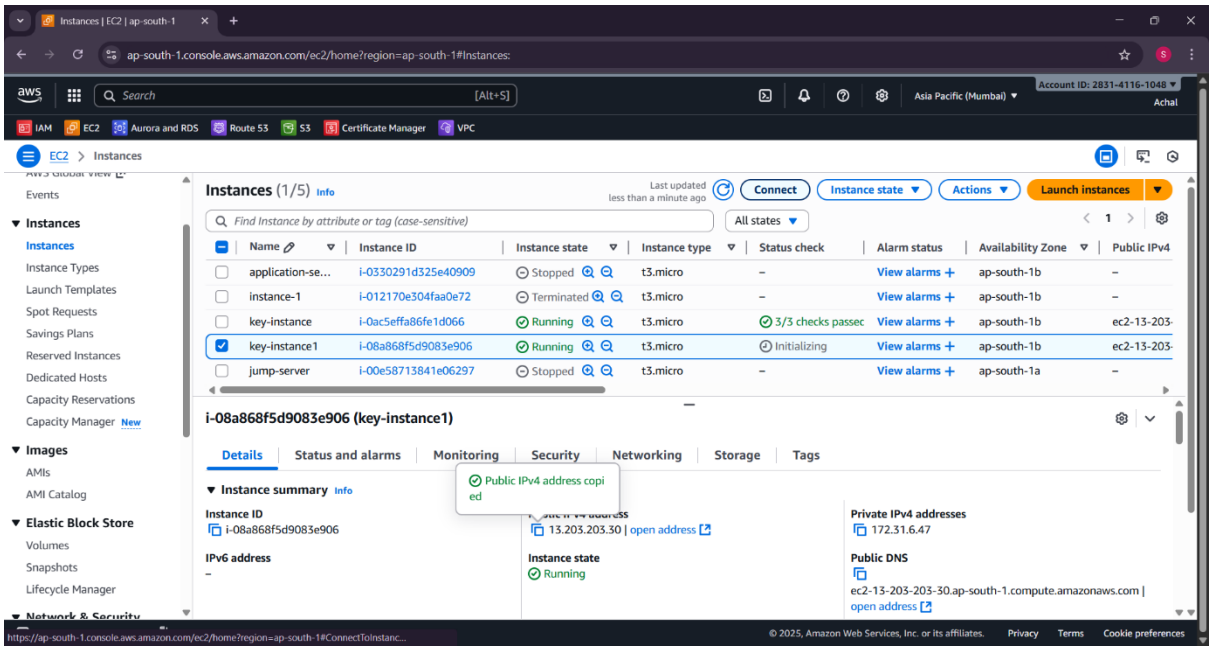


-Step 6: Then launch an instance from that image with new key pair.

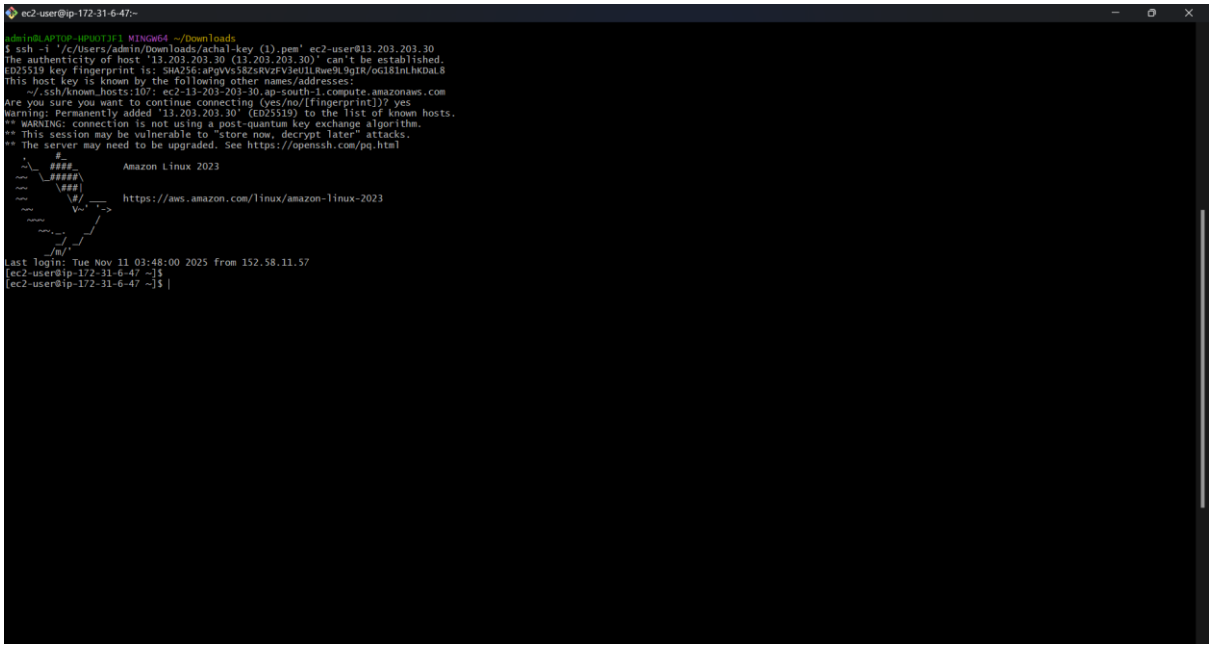




-Step 7: After that we can take access of that EC2-instance.



Without Loss any data of the ec2-instance A we can access that data by creating image and launch an ec2-intance with new key pair



This is a instance ip-172-31-0-122.ap-south-1.compute.internal
