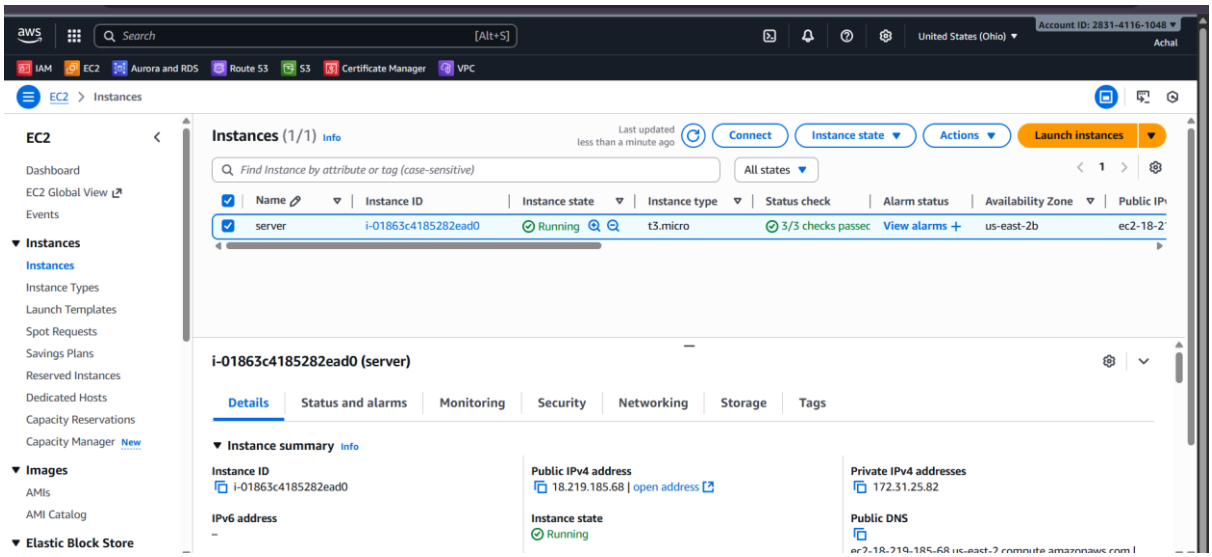
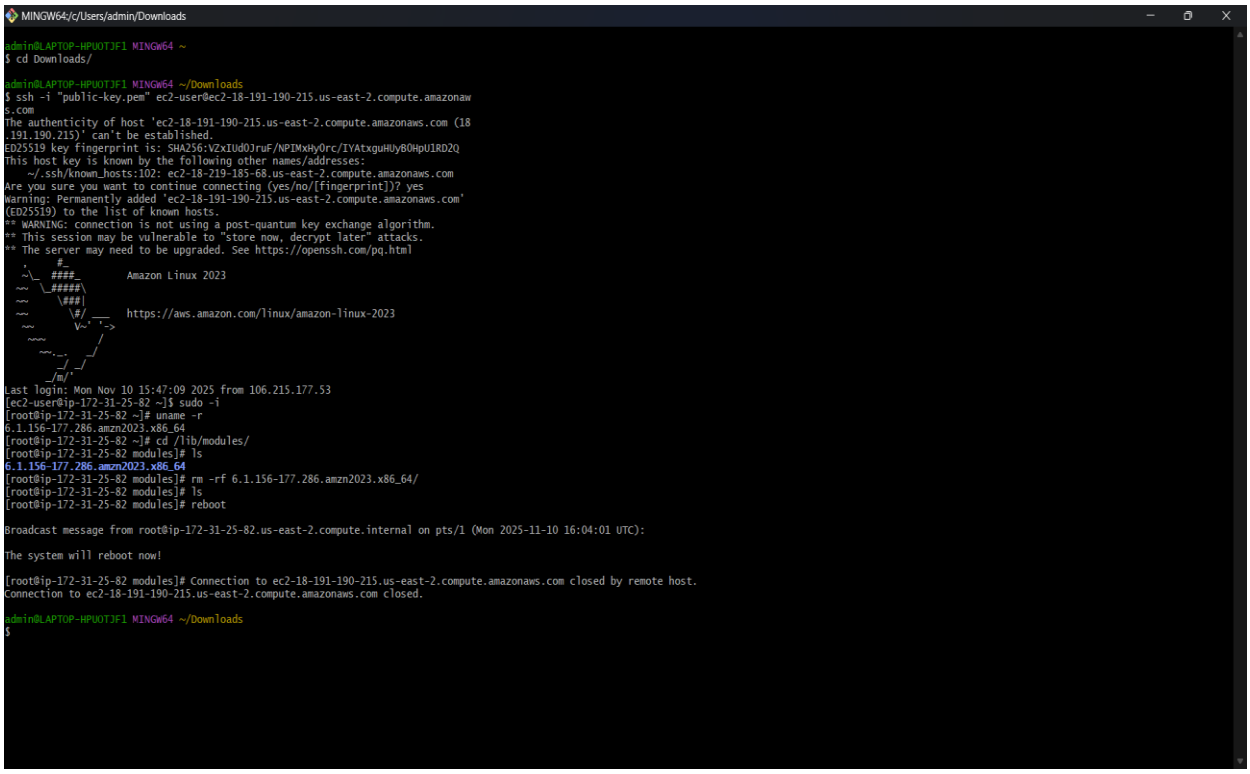
TASK 16

- create an EC2 instance, simulate a software error (1/2), and then recover from it.

-Step 1: Create Ec2-instance



-Step 2: check Kernel using command → uname -r



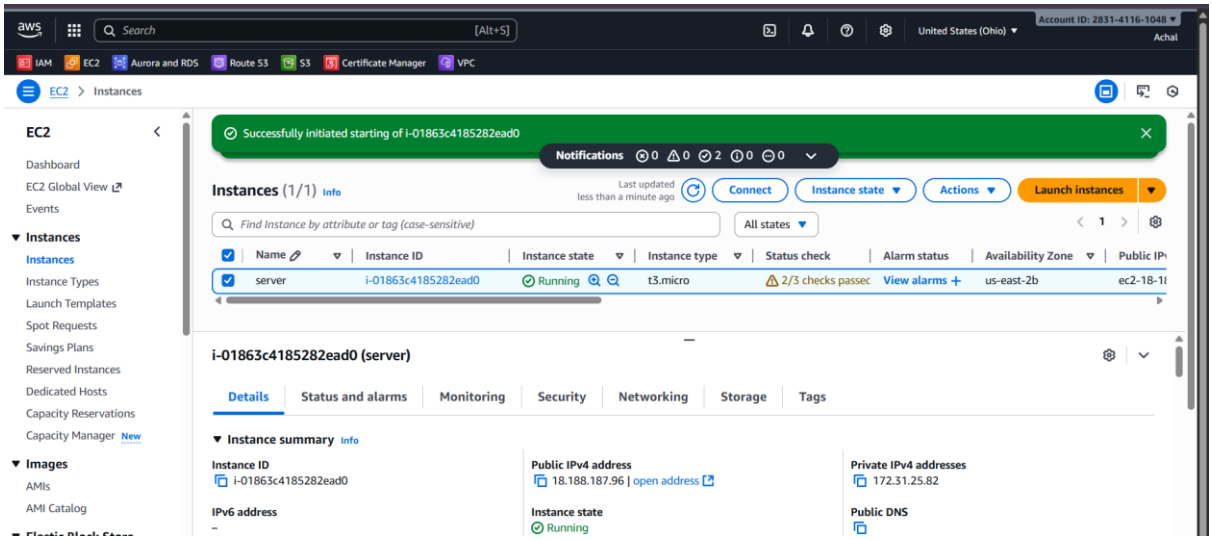
-Step 3: remove kernel folder

cd /lib/modules/

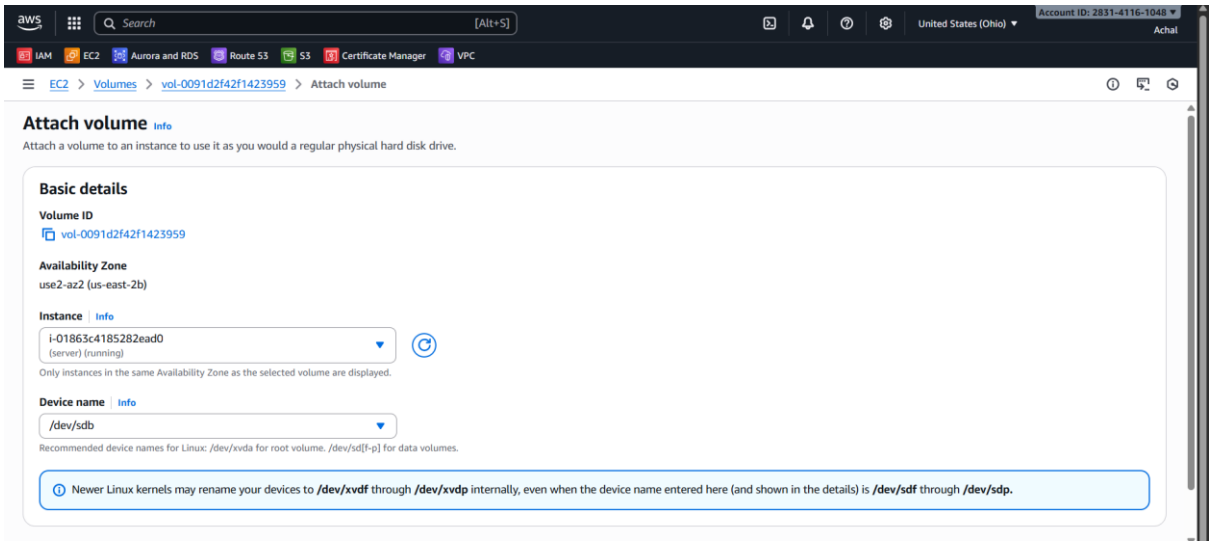
ls → will show kernel folder → rm -rf kernel folder name

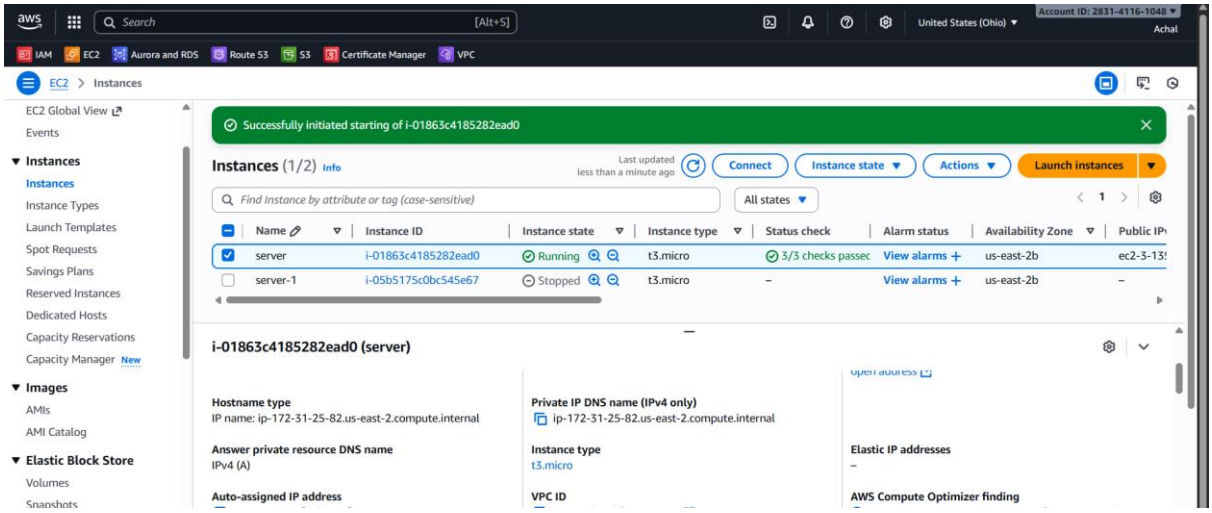
-Step 4: reboot System

-Step 5: Check Status After reboot it will show 2/3 in the t3 micro instance Type.



-Step 6: Copy root volume of instance 2 another instance and attach to the instance 1 to recover from the software problem.





Problem is resolve successfully Status check shows again 3/3 status check in the t3 micro instance type.
