TASK:17

- Why Does VPC subnet reserve 5 IP addresses.
  In every AWS VPC subnet 5 IP Address are always reserved and cannot be used.
  According to AWS official Documentation:
  "Amazon reserves the first four IP addresses and the last IP address in each subnet CIDR block. They are not available for your use."

  The Reserve IP Addresses are:
- First IP →Network address
  Purpose - Identifies the subnet itself.
  Example – 10.0.0.0

- Second IP → VPC Router
  Purpose – Used by AWS To Route traffic within the VPC.
  Example – 10.0.0.1

- Third IP → Amazon DNS
  Purpose – Reserved for DNS services and future use.
  Example – 10.0.0.2

- Fourth IP → Future Use
  Purpose – Reserved for AWS for internal networking.
  Example – 10.0.0.3

- Last IP: → Broadcast address
  Purpose -Reserved even through VPC doesn't used broadcast.
  Example – 10.0.0.255
