TASK 6

- Create Replica of bucket in another account.

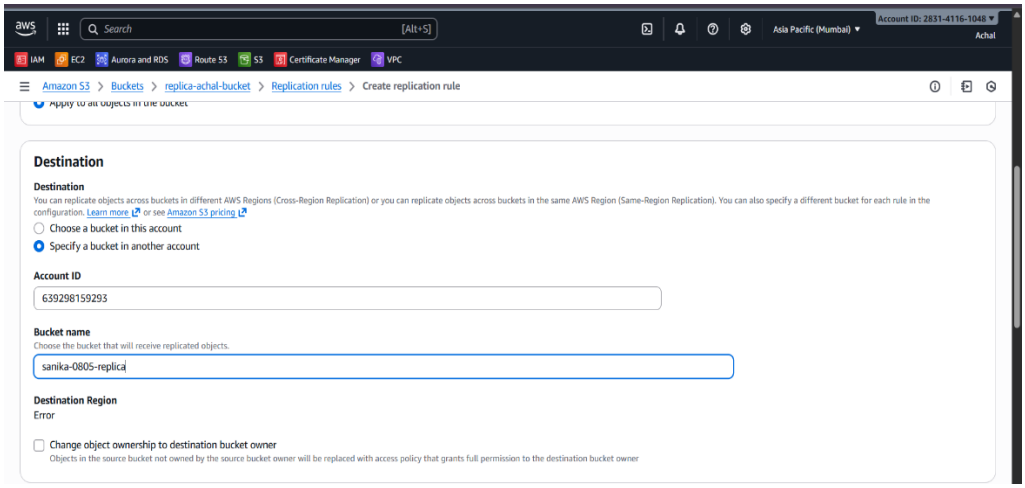
  Step 1: Create bucket in the source account

  Step 2: Enable Bucket Versioning.

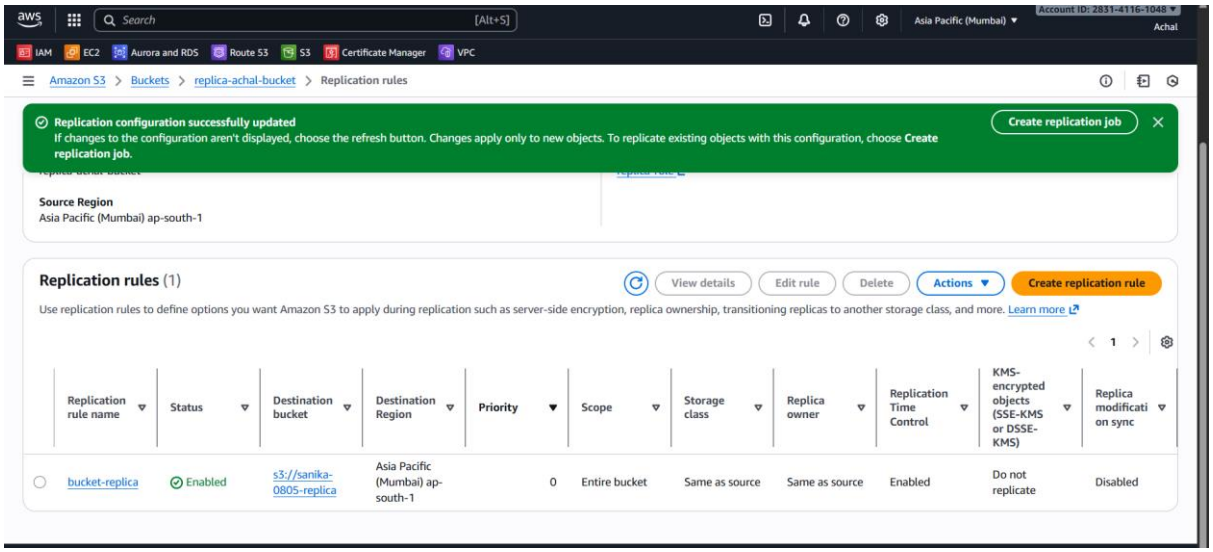
  Step 3: Create a IAM role in the source account.

  Step 4: Go in the Management tab then click on create replication rule.

  - Give replica name and select another account and select role.



- Create replication rule. In the Source Bucket.

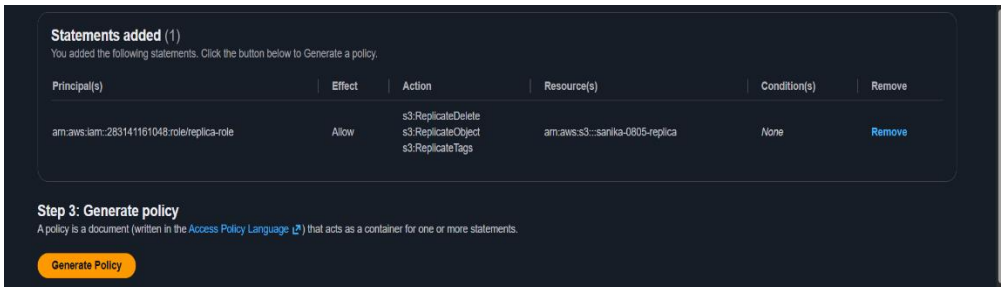


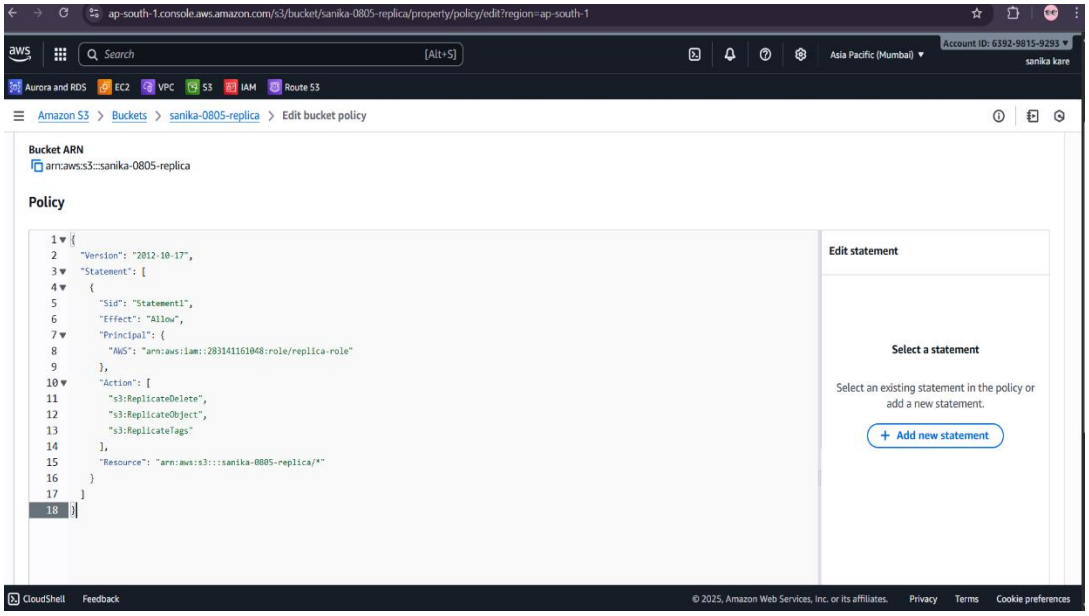
Step 5: In the destination account Create One bucket to access the object of the sources bucket. Enable Bucket Versioning.

Step 6: In the permission Create policy to access the data of the sources bucket.

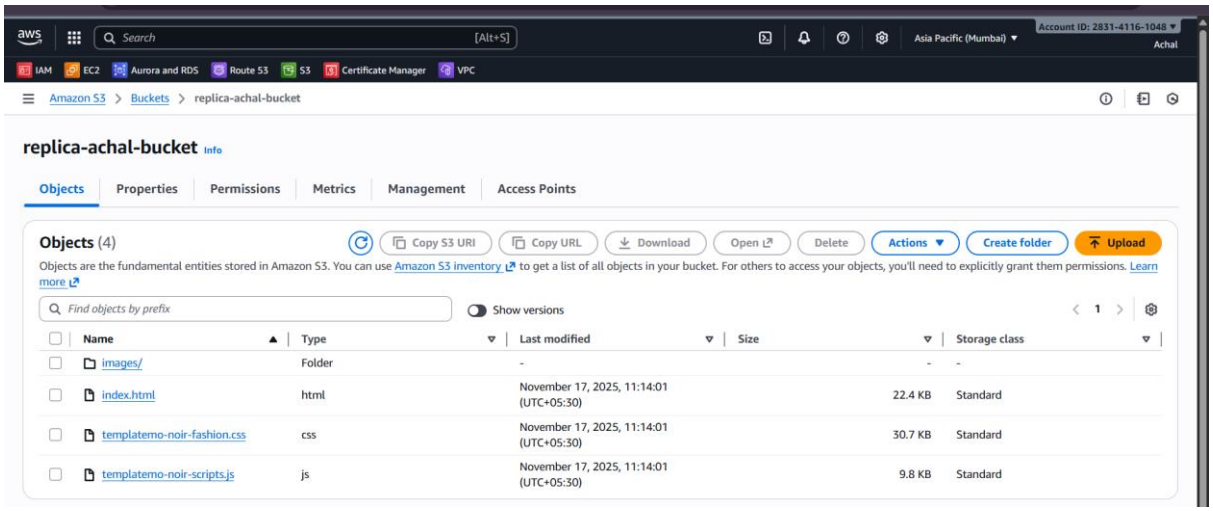
In the policy generator. Create policy.

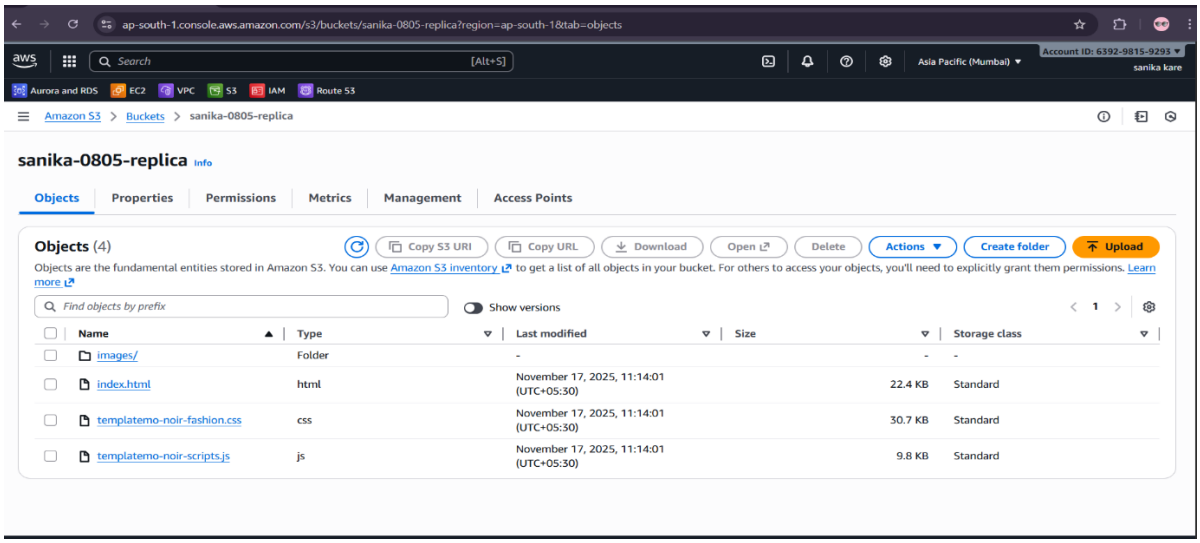
- Select policy type – S3 policy
- Effect - Allow
- Action – s3: ReplicateObject
  s3: ReplicateDelete
  s3: ReplicateTags
- Resource – Destination bucket ARN
- Principle – Source bucket IAM role
- Click on Add Statement and Create policy
- Copy that code and paste in the edit policy inside the permission of the destination.





Step 7: upload Object in the sources bucket.





Step 8: And check in the destination.
