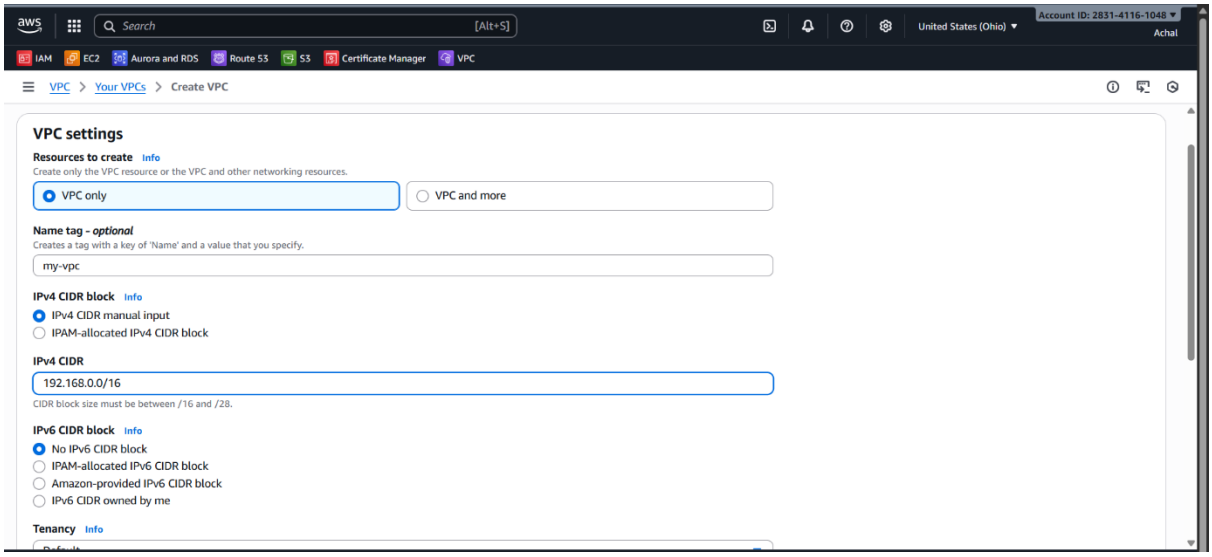
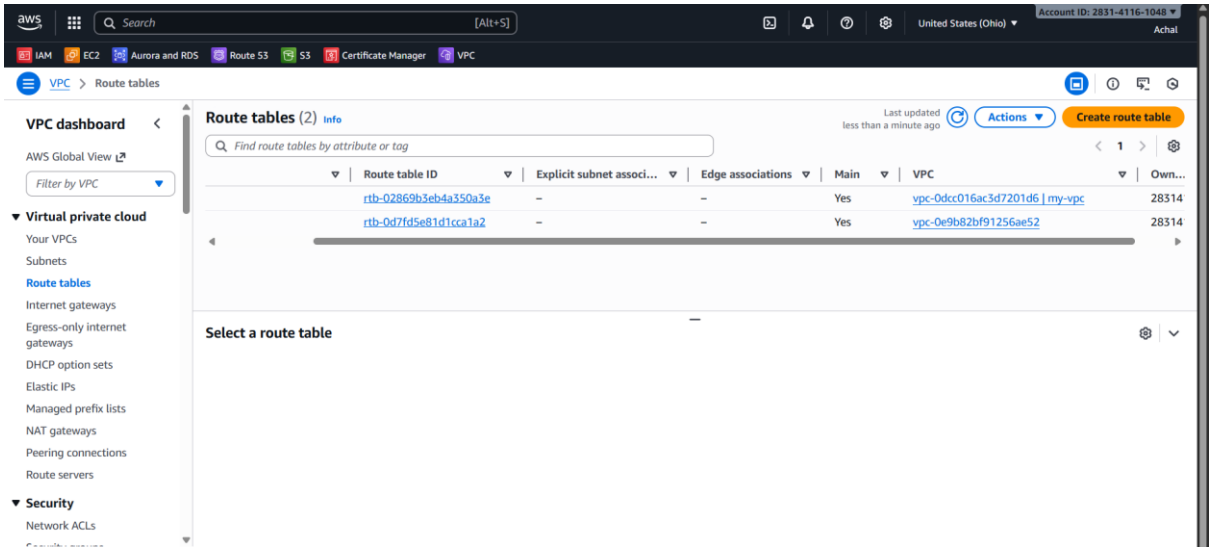
TASK 20

- Delete main route table without deleting VPC.

  Step 1: Create one vpc.

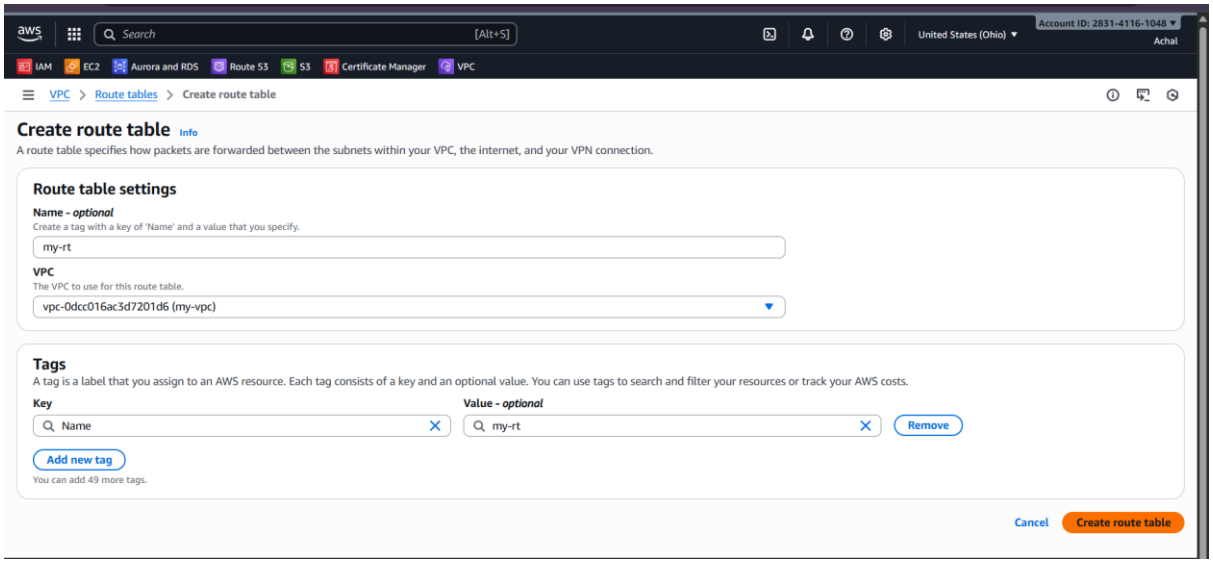


Step 2: After that one route table will also create atomatically and it is a main route table and main route table we can't delete.

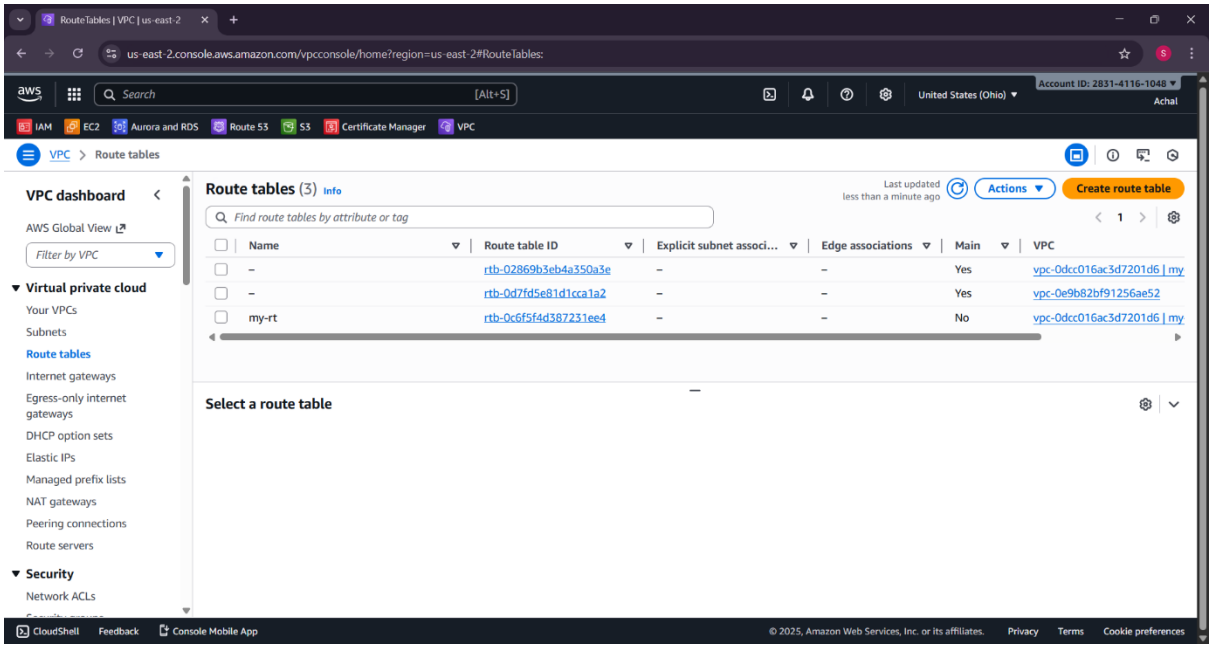


Step 3: When we want to delete that main route table then we should have to create another route table and set as main route table which we have created. After that old route table will not be main route table. And now we can delete that route table.

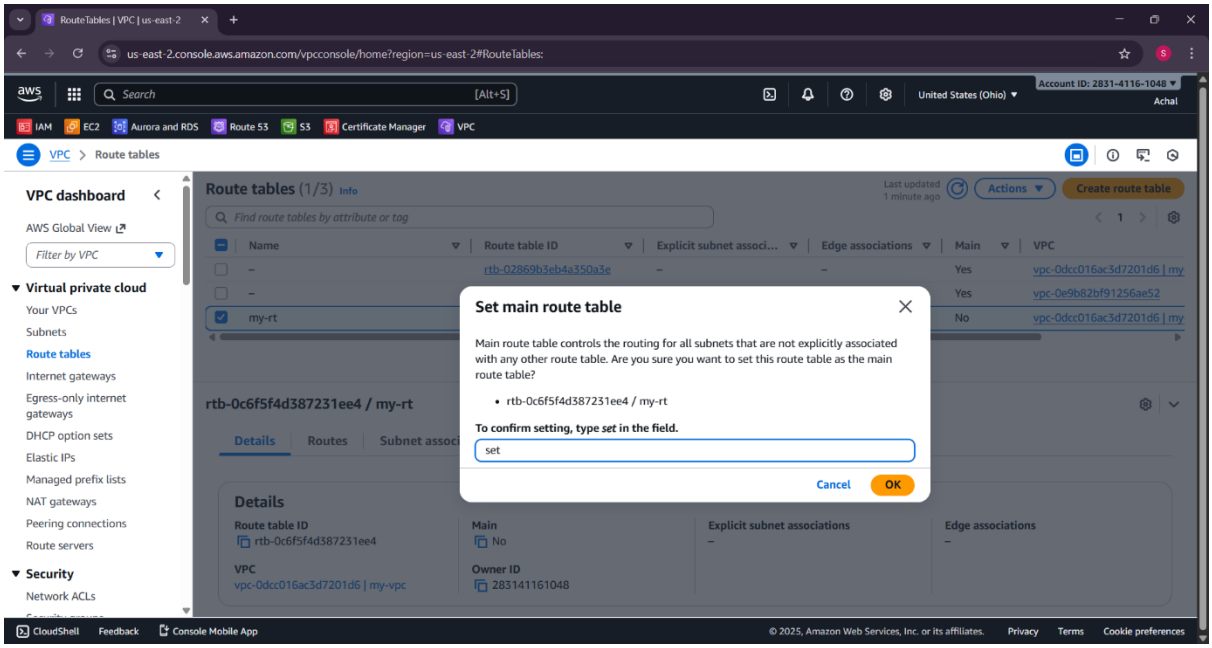
-Create another route table



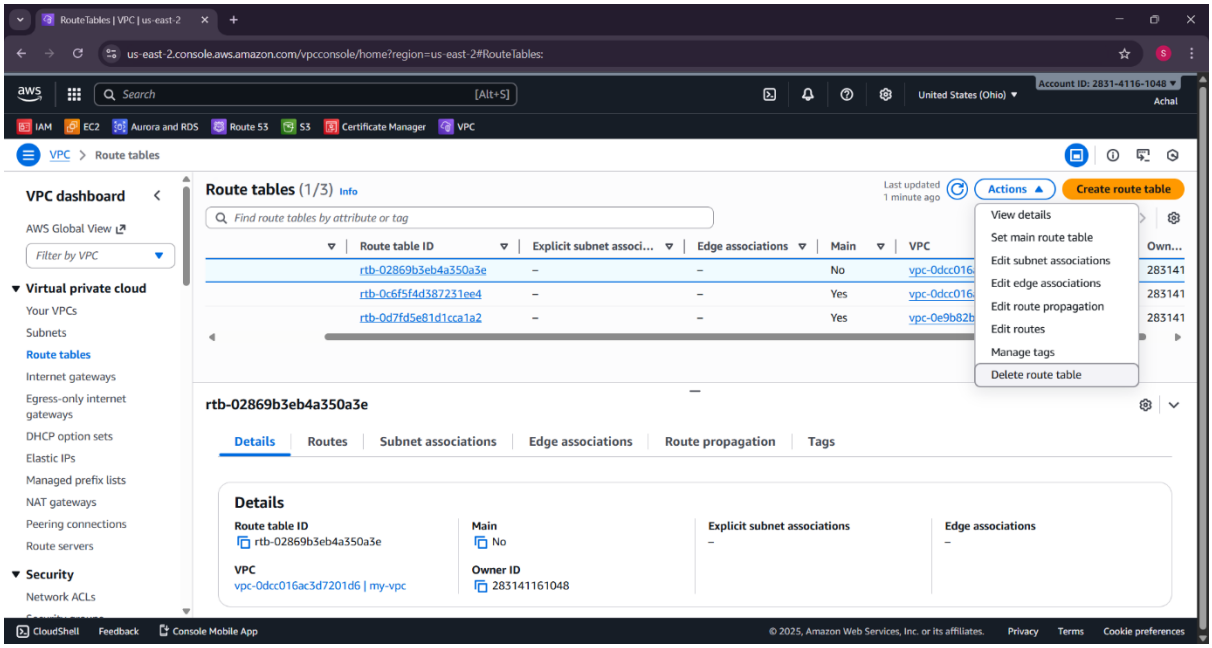
- Set this route table is main



- Select route table and then click on Action – set main route table and click on ok . After that new route table will make main route table and old route table is not main.



- After this all has done we can delete old route table



- In This way we can delete main route table without deleting the VPC.
